

# Cavli C-Series Device Development Kit

## The New Enhanced C-Series DDK (Device Development Kit)

The new enhanced C-Series DDK provides users with flexible product development and evaluation options for several use case scenarios with Cavli C-Series Smart Mini PCIe Modules. The DDK provides users with complete OpenCPU access of Cavli Smart Modules with the necessary GPIOs and interfaces for product testing and development.

Simplified circuit design & development

OpenCPU access and support

On-board LTE, Diversity & GNSS chip antennas

Integrated eSIM support

Reduction in Time-To-Market (TTM) for final device

## Technical Features

- Full device SDK support
- 40 Pin GPIO Interface with additional JTAG & CAN interface
- Support for all Cavli Smart Mini PCIe Modules
- Integrated high-gain chip antenna(s)

# How can Cavli's Device Development Kit fast track your IoT product development journey?

With powerful OpenCPU access to the Cavli Smart modules, development cycle for OEMs making IoT enabled solutions is cut short thereby resulting in reduced R&D effort & costs. With the DDK, the Cavli smart modules can be programmed to host the application to accelerate proof of concept development.

## An indicative list of applications that can be developed easily with the Cavli DDK

Panic Button

Remote Machinery Diagnosis

Solar Photovoltaic Monitoring

Location/Tracking System

Air Quality Management System

EV BMS System

Collision Avoidance System

Geo-Fencing System

Smart Water Management System

Seismic Activity Alert System

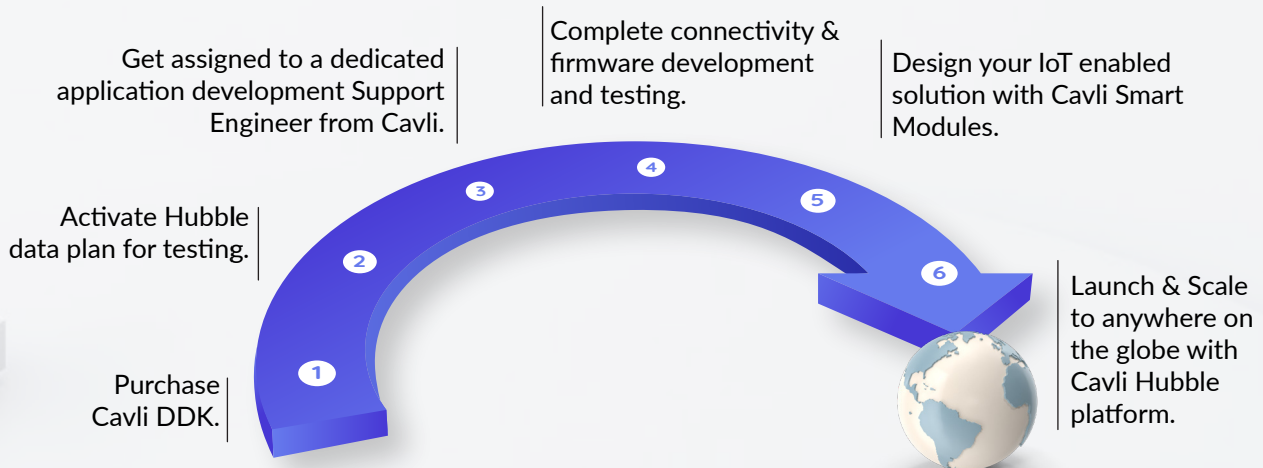

Patient Monitoring System

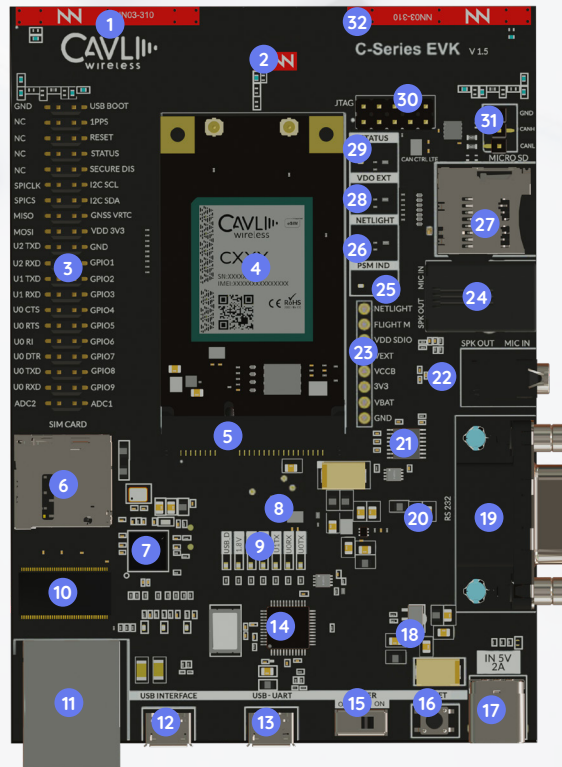

Home Automation System

& many more...

# C-Series Device Development Board Interfaces

- 1 NN03-310 LTE Antenna
- 2 NN03-320 GNSS Antenna
- 3 40 Pin Connector
- 4 C-Series Smart Mini PCIe Module
- 5 Mini PCIe Female Connector
- 6 SIM Card Socket
- 7 Ethernet Chip
- 8 UART Bus Transceiver
- 9 FTDI-UART Transceiver LED
- 10 Ethernet Magnetic Chip
- 11 RJ45 Jack
- 12 USB Interface
- 13 UART Interface
- 14 FTDI USB-UART Converter
- 15 Power Switch
- 16 Reset Button

- 32 NN03-310 Diversity Antenna
- 31 CAN Bus Interface
- 30 JTAG Interface
- 29 Status Indicator
- 28 VREF Indicator
- 27 Micro SD Card Socket
- 26 Network Indicator
- 25 PSM Indicator
- 24 J22 Jack
- 23 8 Pin Connector
- 22 3.5mm Audio Jack
- 21 RS232 Transceiver
- 20 UART Voltage Transceiver
- 19 DB9 Female Connector
- 18 3.3V Regulator
- 17 Power Input (Type-C)

## GPIO Interface

40 Pin Connector provides access to all GPIO pins for OpenCPU development.

## High-gain Antenna(s)

On-board high-gain diversity antenna(s) for cellular and GNSS connectivity negates external antenna requirements.

## JTAG Interface

The JTAG interface allows users to easily test & debug designs on a hardware level.

## Physical SIM Slot

Access to physical SIM slot allows users to choose between the integrated Hubble eSIM and the preferred teleco partner SIM.

## Legacy Connector Options

Legacy connectors such as J22, DB9F RS-232 have also been included in the DDK.

## Host PC Interface

Micro USB connectors are provided for connectivity to the host PC for device development SDK.

## Cavli Smart Modules for which DDKs are available:

**C42GM**  
LTE-M1 NB1 NB2  
Global

**C10GS**  
LTE CAT 1  
Global

**C100GS**  
LTE CAT 4  
Global

# Now BUILD CONNECT SCALE with Cavli Wireless

## About Cavli wireless

Cavli Wireless is an Internet of Things enabler and we aim to democratize the IoT sector with our Software to Hardware product suite which includes Smart Connectivity & Compute Modules, eSIM solutions and Connectivity & Device management Platform. We directly work with telecom operators around the world to facilitate local IoT connectivity, thereby ensuring that any IoT product maker or enterprise in any industry can easily build, connect and scale their IoT solutions to any geography in the world in the most secure, and seamless manner possible.

## Hubble99

Cavli Hubble99 provides the building blocks of IoT - the Edge Hardware, Embedded Software, Global Network Connectivity and IoT Protocols, all bundled for an irresistible proposal of **\$0.99/Device/Month**.

Cellular Modules

eSIM and Data connectivity

Connectivity-Device Platform

\$ 0.99

/device / month
