1 Overview

1.1 Introduction to the Dev Board

The G2000 Dev Board provides a complete solution based on the data functions of the CDMA&GSM modules.

The Dev Board consists of two development boards. One is mother board and the other is interface board, and it provides the power supply interface, USB interface, UART interface and some test points.

For designers who adopt the module in their designs, the Dev Board facilitates their module-based programming and troubleshooting at the project development stage. In order to facilities and simplify the use of Dev Board, and support kinds of modules, we use the jumpers as less as possible, and reserve the interfaces as more as possible, to meet the requirement of plug and play.

The Dev Board provides the following interfaces:

- ◆ Two RS-232 interfaces, one 8-line UART interface
- ◆ Support Standard Subscriber Identity Module (SIM) card interface, can adapt to 1.8V/2.8V level automatically
- ◆ Support audio DAC, can be configured by MCU/Module through I2C bus
- ◆ Power supply can be switched between USB supply and DC power supply

1.2 Modules Support by G2000

The Dev Board supports MG2639 V1, MG2639 V2, MG2639 V3, MC8332, MC8618, MG2618 modules.

Table 1 - 1 Module list supported by G2000 Dev board

Support Modules	Corresponding Interface board	Remark
MG2639 V1	MG2639 V3 CVB_B	
MG2639 V2	MG2639 V3 CVB_B	
MG2639 V3	MG2639 V3 CVB_B	
MC8332	MG2639 V3 CVB_B	
MC8618	MC8618 CVB_B2	
MG2618	MG2618 CVB_B	

2 Function Introduction

2	Module Interface 2 (J8)	The Module Interface's signals Introduction (Marked as J8 on Dev Board)											
		Signal Description	Signal Definition	Signal Description	Signal Definition	Signal Description	Signal Definition	Signal Description	Signal Definition	Signal Description	Signal Definition		
3	UART 1 (COM1)	The interactive interface (UART 1) of module, which is used to interact through AT commands.											
		DAC PCM data input	PCMIN	GND	39	40	Ground						
		DAC PCM bytes synchronization	PCMSYNC	GND	37	38	Ground						
		DAC PCM clock	PCMCLK	GND	35	36	Ground						
		DAC PCM data output	PCMOUT	GND	33	34	Ground						
		DAC PCM reset	PCMRST	NC	31	32	NC						
		DOWNLOAD Key signal output	SOFT_UPDATE	NC	29	30	NC						
		3.3V power output	VCC_3V3	NC	27	28	NC						
		1.8V power output	VCC_1V8	MCU_MPP1	25	26	MCU Status signal 1						
		The extended signals connected to extended interface J17	Extended signal 0	GPIO_0	MCU_MPP2	23	24	MCU Status signal 2					
			Extended signal 1	GPIO_1	MCU_MPP3	21	22	MCU Status signal 3					
			Extended signal 2	GPIO_2	SDA	19	20	I2C data cable					
			Extended signal 3	GPIO_3	SCL	17	18	I2C clock cable					
			Extended signal 4	GPIO_4	GND	15	16	Ground					
			Extended signal 5	GPIO_5	ISENSE	13	14	Charge current detection					
			Extended signal 6	GPIO_6	BATSNS	11	12	Battery voltage detection					
			Extended signal 7	GPIO_7	CHRLDO	9	10	charge on/off control					
			Extended signal 8	GPIO_8	GATDRV	7	8	Charging dynatron control					
Extended signal 9	GPIO_9	RXD3	5	6	UART3 Receiving data								
USB differential data (-)	USB_DM	TXD3	3	4	UART3 Transmit data								
USB differential data (+)	USB_DP	USB_5V	1	2	USB +5V input								

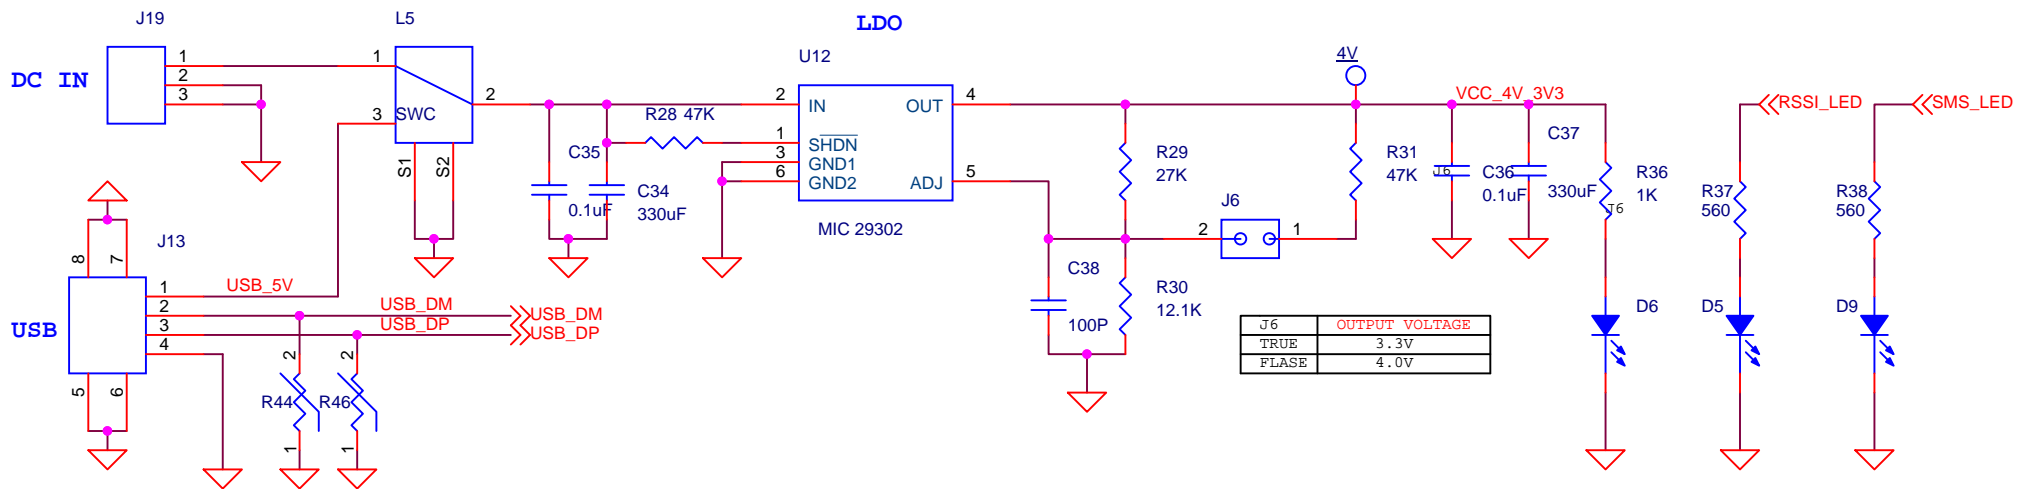

4	UART 2(COM2)	The interactive interface (UART 2) of module, which is used to output the debug log											
5	UART 3(COM3)	The interactive interface (UART 3) of module, which is used to output the GPS location information on module MG2639 V3.											
6	USB (J13)	Output the signals USB_DM , USB_DP of J8 module interface, and USB interface connects to +5V voltage input.											
7	Power switch (L5)	The user can choose the power mode either by DC power supply or +5V power supply through this switch.											
8	Power supply interface (J19)	The power input of Dev Board is DC power supply, and the voltage range is 6V-9V											
9	Function extended Interface (J18 , J17)	The extended Interface's signals Introduction (Marked as J18 on Dev Board)						The extended Interface's signals Introduction (Marked as J17 on Dev Board)					
		Signal Description		Signal Deification		Signal Description		Signal Description		Signal Deification		Signal Description	
		I2C data cable	1	SDA	SCL	2	I2C clock cable	Extended signal 0	1	GPIO_0	GPIO_1	2	Extended signal 1
		NC	3	NC	NC	4	NC	Extended signal 2	3	GPIO_2	GPIO_3	4	Extended signal 3
		NC	5	NC	NC	6	NC	Extended signal 4	5	GPIO_4	GPIO_5	6	Extended signal 5
		Ground	7	GND	GND	8	Ground	Extended signal 6	7	GPIO_6	GPIO_7	8	Extended signal 7
		3.3V power output	9	VCC_3 V3	VCC_1V8	10	1.8V power output	Extended signal 8	9	GPIO_8	GPIO_9	10	Extended signal 9

10	MCU debug interface (J12)	MCU debug interface's function introduction (use ATMEGA32L MCU (Marked as U9 on Dev Board))						MCU debug interface's function introduction (Use PIC16F616 MCU (Marked as U17 on Dev Board))						
		Signal Defication	VCC_3V3	MOSI	RESET	SCK	MISO	GND	Signal Defication					
		Signal Description	1 3.3V power supply	2 SPI MOSI	3 Rest signal	4 SPI clock signal	5 SPI MISO	6 Ground	Signal Description					
11	DOWNLOAD button	This button is connected to the RI signal of J4 module interface, the signal is set to low when press this button. When press this button, the MG2639 V1/V2/V3, MG2618 modules will enter to DOWNLOAD mode.												
12	RESET button	This button is connected to the SYS_RESET signal of J4 module interface, the SYS_RESET signal is set to low when press this button. When press this button and then release it, the module will be reset.												
13	ON/OFF button	This button is connected to the ON/OFF signal of J4 module interface, the ON/OFF signal is set to low and the module will start up.												
14	Jumper (J7)	This jumper connects to the module signal ON/OFF of J4 interface, when inserts the cap on this jumper, ON/OFF is set to low level, and the module will turn on once connecting to the power supply.												
15	Loudspeaker voice output interface (J20)	DAC speaker voice output interface												

16	Earphone input/output interface (J25)	DAC MIC input and voice output
17	Earphone input/output interface (J14)	MIC2 input and earphone voice output
18	SIM card console(J16)	This console connects to the signals (V_CARD, CARD_CLK, CARD_DATA, CARD_RST) on the interface J4.
19	PHONE interface (J15)	Phone interface, can directly connect to the ordinary telephone receiver, input through MIC1, output through SPK_1
20	Audio DAC chip (U7)	LM49350 chip, can configure the parameters by MCU(U9 or U17) or module through I2C bus.
21	MCU (U9)	ATMEGA32L MCU (NC), can be used for DAC chip configuration through I2C bus.
22	MCU (U17)	PIC16F616 MCU (NC), can be used for DAC chip configuration through I2C bus.
23	RS-232 chip (U5)	ICL3238 chip, for RS-232 level and TTL level transformation on UART1.
24	RS-232 chip (U6)	ICL3238 chip, for RS-232 level and TTL level transformation on UART2 and UART3
25	Main power supply chip (U12)	MIC 29302 chip, it can supply +4V power level to the module, and the max. current is 3A.
